EXPERIENCE

Co-founder — Turkbox
New Delhi, India

Aug 2018 - Oct 2019

Turkbox is a platform that allows readers to pay for digital news by performing CAPTCHA-like data classification tasks. Turkbox is funded by the Google News Initiative. More information at <https://www.turkbox.io>

- Developed widgets to support a variety of tasks including image categorization, handwriting recognition, image segmentation, which readers complete to access news articles and other premium content
- Built dashboard to manage A/B testing operations and visualize data on reader retention, labelling accuracy, and revenue for publishers
- Created pipelines to serve tasks on widgets, perform real-time validation of reader responses, and optimize React bundle sizes for website injection
- Technology Stack: React, Node.js, Socket.io

Full-Stack Intern — Amadeus IT Group
Nice, Alpes-Maritimes, France

Feb 2018 - Aug 2018

- Developed a progressive web app to provide friends/family of travelers with real-time data such as flight status, visual flight paths, local airport information, and send push notifications on take off and landing
- Built backend to consolidate streams of real-time flight telemetry data into a central database with REST API to query statuses of specific flights
- Technology Stack: Angular, Node.js, Apache Kafka, MongoDB

Frontend Intern — Amadeus IT Group
Waltham, Massachusetts, USA

May 2017 - Aug 2017

- Worked on frontend for a flight search application to explore flights for vacations, requiring minimal search input from the user
- Created and implemented high fidelity prototypes for the application, incorporating feedback from stakeholders over multiple iterations
- Technology Stack: Angular, RxJS, Adobe XD

Lead Developer — Illini Motorsports
Urbana, Illinois, USA

Aug 2015 - May 2018

Illini Motorsports is the University of Illinois' Formula student team, which builds a formula-style race car to compete against other collegiate teams

- Developed an app to visualize sensor data broadcasted from the race car, allowing engineers to diagnose performance issues remotely, drastically reducing time taken for pit-stops and car repair during races
- Technology Stack: React, Particle Electron

EDUCATION

University of Illinois at Urbana-Champaign Aug 2015 - Dec 2019
B.S. in Aerospace Engineering, Minor in Computer Science

Relevant Coursework: Data Structures, Discrete Structures, Principles of User Interface Design, Interdisciplinary Design Studio, Applied Cryptography

LANGUAGES

JavaScript CSS Java
HTML TypeScript

FRAMEWORKS & TOOLS

Angular Express.js Figma
React MongoDB Photoshop
Redux Git Adobe XD
Node.js Flask Docker

OPEN SOURCE CONTRIBUTIONS

Angular Pipes

github.com/fknop/angular-pipes

- Developed a template-level data transformation pipe to add ordinal suffixes (eg. "st" in "1st") to integers

Reactochart

github.com/spotify/reactochart

- Introduced a 'limit' parameter on graph lines to constrain width and height, enabling intersection points on line charts and plots

Gatsby.js

github.com/gatsbyjs/gatsby

- Updated documentation about the Gatsby/React build process

SELECTED HACKATHON PROJECTS

Packeroo - Grand Prize Winner
AngelHacks Boston 2017

- Skill for Amazon Alexa to assist with packing for trips

Krannert - Best Use of Amadeus APIs
HackIllinois 2019

- Progressive web app to book flights and hotels collaboratively with friends and family

Argonaut - Best Blockchain Hack
HackMIT 2019

- Online marketplace to voluntarily sell personal data in exchange for the ALGO cryptocurrency
